

## **Attention: Attachment to Site Evaluation Applications**

On your onsite sewage systems application for site evaluation you are to:

### **Attach to this application the following:**

1. Location map to reach site.
2. Site drawing showing property lines and dimensions of same; location of existing structures; well, ponds, streams, gullies, swamps, etc; easements, roads, drives, right-of-ways; if present.
3. Proposed (or existing) location of structure(s) to be served by the system; proposed system location.

If any of these items are missing from the application, including a notation that recent flag location the 378 have been set by the Corps of Engineers on lake front lots, your application will be returned to you, including your check.

The site evaluation will not even be attempted, without the above items.

If we arrive at the site and there are no property lines marked, or if the lot is so overgrown with brush the contour lines are not readily visible, we will not attempt to do the site evaluation.

The lot is not to be reshaped, leveled, dozed, cut or filled prior to having the site evaluation done by the Health Dept. If it is, the lot will be deemed unsuitable and you will have to purchase another lot for the location of your lateral lines.

When we return your application for failure to follow the above procedures, it will be accompanied by this letter and the items that are hi-lighted will need to accompany the application before returning it to the health department, all of this will result in your application not being processed in a timely manner.

You are responsible for a complete, accurate application and an undisturbed site that will allow us to give you the best site evaluation possible.

Thank You,  
Environmental Staff of Pennyrite District Health Dept.
